Modulating linear actuator for adjusting dampers and slide valves in technical building equipment

- Actuating force 450 N
- Nominal voltage AC 100...240 V
- Control modulating 2...10 V
- Position feedback 2...10 V
- Length of Stroke Max. 100 mm, fixed setting

If a rotary support and/or coupling piece is used, losses in the actuation force losses are to be expected.

The linear actuator is screwed directly to the housing at three points. Afterwards, the head of the gear rod is fastened to the moving part of the ventilation application (e.g. damper or slide valve).

Applications with transverse forces	The coupling piece with the internal thread (Z-KS1) is connected to the head of the gear rod. The rotary support (Z-DS1) is screwed to the ventilation application. Afterwards, the linear actuator is screwed to the previously mounted rotary support with the enclosed screw. Afterwards, the coupling piece, which is mounted to the head of the gear rod, is attached to the moving part of the ventilating application (e.g. damper or slide valve). The transverse forces can be compensated for to a certain limit with the rotary support and/or coupling piece. The maximum permissible swivel angle of the rotary support and coupling piece is 10° (angle), laterally and upwards.

**Stroke limitation** If the stroke limitations are used on the gear rod, the mechanical operating range on this side of the gear rod can be used starting with an extension length of 20 mm.
